

ANDRIY KOTKO

Frontend Engineer

Pego (Alicante), Spain | +34 647 185 406 | kotkoa@gmail.com | [linkedin.com/in/kotkoa](https://www.linkedin.com/in/kotkoa) | github.com/Kotkoa

Authorized to work in Spain, no sponsorship required | Remote EU/US | Hybrid Valencia–Alicante

SUMMARY

Frontend Engineer with 4+ years of commercial experience building production web apps with React, TypeScript, Next.js, and GraphQL, most recently AI-powered SaaS products with real-time conversational interfaces, after earlier work in web development and project management. Focused on complex product UI, real-time data, performance, design systems, accessibility, and test automation (Jest, Cypress, Playwright) in Agile/Scrum teams.

SKILLS

Frontend: React, TypeScript, JavaScript, Next.js (SSR/SSG), HTML5, CSS3, SASS, Tailwind CSS, MUI

State & Data: Apollo Client, GraphQL, REST APIs, Node.js, Redux Toolkit, MobX, Jotai, WebSocket

UI Engineering: Design systems, Storybook, accessibility (WCAG), i18n, responsive design, Figma

Testing & Delivery: Jest, React Testing Library, Cypress, Playwright, CI/CD (GitHub Actions), feature flags

AI Tools: ElevenLabs React SDK, RAG knowledge-base UI, Copilot (2023+), Claude Code and Codex (daily, 2025+)

Languages: English (C1, professional working), Spanish (conversational), Ukrainian (native), Russian (fluent)

EXPERIENCE

CloneForce

Nov 2024 – Mar 2026

Frontend Engineer (Contract)

Remote, USA

- Main frontend contributor (about 40% of the codebase) in a 2–4-person team on an AI digital-clone SaaS with up to 300 active users. Shipped its core flows: creating a clone (multi-step wizard, RAG knowledge base), teaching it skills (skill builder with versioning), and talking to it (custom ElevenLabs voice chat, Slack/Teams/WhatsApp).
- Led the Apollo Client 3 to 4 migration across 136 files; built role-based admin and organization switching that clears cached data and reconnects GraphQL WebSocket subscriptions, so users never see another tenant's data.
- Cut Largest Contentful Paint on the main clone grid by about 1.2s (Chrome DevTools) by deferring heavy third-party scripts and prioritizing the first above-the-fold images with next/image while lazy-loading the rest.
- Wrote 41 of 49 Cypress specs (370+ test cases) covering login, chat, clone creation, and data isolation between organizations; set up ESLint, strict TypeScript, and pre-commit checks, and reviewed teammates' pull requests.

On the Beach (via Netguru)

Apr 2025 – Oct 2025

Frontend Engineer (Part-time Parallel Contract)

Remote, UK

- Upgraded the booking flow of a major UK travel retailer (tens of thousands of customers) to React 19 and Next.js 15 with GraphQL and MobX.
- Rebuilt Search Results and shipped about 25 feature-flagged A/B experiments (up to 3 at a time) with search-logic changes and analytics tracking.
- Worked in a 10–16-person Scrum team with backend, QA, design, and product; reviewed pull requests.

Human Capital Exchange (HCX)

Sep 2022 – Nov 2024

Frontend Engineer (Contract)

Remote, USA

- Built the core investing flow for an early-stage fintech marketplace selling shares in athletes' future earnings: live price chart with each investor's orders, 5-step buy flow with PandaDoc e-signing, order book, and portfolio.
- Grew from one of up to 11 contributors to de facto lead frontend engineer, owning most frontend work by 2024; built the investor-accreditation gate and the platform's first KYC flow almost single-handedly.
- Delivered the Document Center in 2 weeks and Favorites with custom categories and drag-and-drop in 10 days.
- Built and owned the Cypress suite with Auth0 programmatic login, GraphQL mocks, and visual-regression snapshots in GitLab CI.

Bridge The Gap (client: Yara International)

Dec 2022 – Jan 2024

UI Engineer (Part-time Parallel Contract)

Remote, EU

- Yara design system: built 5 new accessible React components (Stack, Navigation Rail, Accordion, Select Item, Select Group), each shipped as its own npm release after code review, with Jest tests; improved 17 more.
- Extended design tokens across React and React Native, moved web font sizes from px to rem, and rebuilt the Storybook 7 doc pages with Figma links across 107 files.
- Bridge The Gap products: upgraded Next.js 12 to 14 and Gatsby 3 to 5, and added components to the team's npm design system.

Root Name System (RNS)

Nov 2021 – Jul 2022

Frontend Engineer (Contract)

Remote, Singapore

- Delivered 3 landing pages, 2 web apps, and 35 email templates for a digital-ID platform with Redux Toolkit, MobX, and Styled Components; localized it into 12 languages and added TypeScript and Jest coverage.

PROJECTS

EV Libre – Side Project

Nov 2025 – Present

Production React 19 + TypeScript PWA tracking about 11,800 EV charge points across Spain with real-time status, web-push alerts, and a live Stripe subscription; built solo on Supabase with 970 automated tests.

EDUCATION

Bachelor's Degree in Instrument Engineering, Sevastopol State Technical University, Ukraine

Certification: Claude Code: Professional AI Setup, Frontend Masters (2025)
