Summary

Senior Frontend Engineer with 6+ years of commercial experience building scalable, AI-powered web applications with React, TypeScript, Next.js, and GraphQL.

Specialized in AI-powered SaaS products and real-time conversational interfaces – voice AI integrations (ElevenLabs), GraphQL subscriptions, OAuth flows, and experimentation systems. Deep expertise in the Apollo Client ecosystem: AC3→4 migrations, cache policies, normalized caching, and WebSocket subscriptions, alongside design systems, performance optimization, and testing infrastructure.

Based in Spain, available for remote roles across Europe (CET/CEST timezone).

Core Stack: React, TypeScript, JavaScript ES6+, Next.js (SSR/SSG), Apollo Client, GraphQL, REST APIs, Jotai, MUI, Tailwind, SASS, Jest, Cypress, Playwright, Storybook, Webpack, CI/CD, Git

AI & Real-Time: GraphQL Subscriptions, graphql-ws, ElevenLabs SDK, OAuth Integrations, Feature Flags, A/B Experimentation

Architecture & Frontend Platforms: Design Systems, Design Tokens, Performance Optimization, Testing Infrastructure, Frontend Modernization

Experience:

CloneForce, Newport Beach, California, United States (Remote)
Frontend Engineer (Contract)

November 2024–March 2026

Frontend Engineer on an AI-powered digital clone platform that creates personalized AI assistants and coaches powered by OpenAI, Pinecone (RAG), and ElevenLabs, deployed across Slack, MS Teams, and web channels. Developed frontend interfaces for real-time human-AI interactions, conversational voice experiences, and automation workflows within the core web application.

- Developed real-time AI interaction interfaces using GraphQL subscriptions and streaming updates, enabling conversational clone experiences with live AI responses.
- Built and maintained a reusable UI component library with 50+ MUI-based components, improving visual consistency across the platform.
- Integrated ElevenLabs voice chat through the React SDK, replacing the default embed widget with a custom implementation for greater control over the conversational voice UI.
- Implemented real-time updates using GraphQL subscriptions (graphql-ws), enabling live clone interactions and streaming AI responses.
- Built OAuth integration flows for Microsoft, Google, and HubSpot, allowing clone skills to securely connect with external platforms on behalf of users.
- Improved frontend development workflows with strict TypeScript, ESLint, GitHub branch protections, and standardized architecture patterns to maintain consistent code quality.
- Improved page load performance by 1.2s through code splitting, lazy loading, and Apollo Client cache optimization.
- Implemented comprehensive Cypress E2E testing covering critical user flows across the AI assistant interface.

Technologies Used: React, Next.js (SSR), TypeScript, Jotai, Tailwind, SASS, MUI, Apollo GraphQL, GraphQL Subscriptions, ElevenLabs React SDK, Webpack, Jest, Cypress, Git

On the Beach, Manchester, England, United Kingdom (Remote)
Frontend Engineer (Contract)

April 2025–Oct 2025

Frontend Engineer in a UK-based team modernizing the On the Beach holiday platform, <https://www.onthebeach.co.uk/>. Working with a large-scale legacy codebase focused on frontend modernization, experimentation systems, performance optimization, and maintainability improvements.

Collaborate with UK-based engineers to develop new frontend features and experimentation flows using React 19, Next.js 15, GraphQL, and feature flags for controlled rollouts and rapid reversions. Contribute across frontend architecture modernization, Apollo Client migration, API integrations, analytics instrumentation, and user experience optimization.

As part of the Shop XP team, contributed to several frontend initiatives, including:

- Upgrading the Booking Flow technology stack to React 19 and Next.js 15, improving performance, security, and engineering efficiency.
- Migrating from Apollo Client 3 to Apollo Client 4, improving data management, caching behavior, and application stability.
- Developing new UI toggle features, refining default search logic, and expanding analytics and experimentation tracking coverage.
- Implementing feature flags for controlled rollouts and A/B experimentation, enabling data-driven UI decisions across three concurrent experiments.

These improvements contributed to faster page loads, smoother navigation between search and deal detail pages, and a more scalable foundation for future development.

Technologies Used: JavaScript ES6+, TypeScript, React 19, Next.js 15 (SSR/SSG), MobX, Apollo Client 4, GraphQL, Webpack, Git

Human Capital Exchange, Los Angeles - (Remote)
Frontend Engineer (Contract)

Sep 2022 - Nov 2024

Developed an [HCX](#) trading platform for a new equity-based asset class using React, Typescript, GraphQL, Jotai, and Jest.

- Configured a CI/CD pipeline with Jest unit tests and Cypress E2E integration, achieving 80%+ test coverage for critical user flows, reducing regression bugs by 35%, and decreasing manual QA effort through automated user flow validation.
- Streamlined account setup flows for multiple user types by integrating JSON Forms, Yup validation, and Apollo GraphQL, significantly improving onboarding and form completion flows.
- Collaborated with the backend team to extend and improve API integrations, adding new features and resolving issues that improved server performance by 20% and accelerated feature delivery by 25%.
- Simplified the payment architecture by removing three blockchain libraries, migrating to bank transactions, and implementing debit/credit card and bank account functionality, reducing operational costs by 30%.
- Integrated DocuSign for in-app application signing, streamlining document workflows, reducing turnaround time by 40%, and supporting KYC and legal compliance requirements.
- Contributed to onboarding documentation and developer integration processes, helping reduce onboarding time from one month to one week.
- Enhanced the global Material-UI theme system by consolidating shared styles and reusable patterns, reducing component development time, and saving approximately 2 months of engineering work.

Yara International, Singapore - (Remote)
UI Engineer

Dec 2022 - May 2024

Hired to the design system's team of 10 developers to enhance the usability and accessibility of [Yara International's](#) design system.

- Added more than 10 new components to the design system and fully refactored existing ones, improving accessibility to meet international standards and increasing compliance by 44%.
- Implemented a design token system that improved design-to-code efficiency by 32%, enabling more consistent design adoption across projects.
- Collaborated closely with designers to refine and implement component designs, including improvements to the Storybook theme and overall UI consistency.
- Maintained a Next.js website, migrating the platform from Next.js 12 to 14.

- Updated the design system npm library with new reusable React components.
 - Contributed to the design system npm library by implementing major updates to the ProfileCard component across multiple releases, improving layout styling, UI consistency, and component functionality.
-

Root Name System (RNS), Singapore - (Remote)

Jan 2020 - Jun 2022

Frontend Engineer

Maintained the RNS digital identity platform used to issue digital IDs for Palau's digital residence, contributing to frontend application development within an international tech team.

- Developed 3 landing pages, 2 web apps, and 35 HTML email templates for user subscriptions, improving user engagement and implementing features such as ID verification, TypeScript migration, and Jest test coverage.
 - Refined MaterialUI components into Styled Components, improving UI flexibility and responsiveness; decreased app load time by 40% and increased user satisfaction ratings by 15%.
 - Managed complex application state using Redux and Redux Toolkit; later migrated state management to MobX, reducing boilerplate by 40% and improving maintainability across the application.
 - Integrated internationalization using i18n, enabling localization for 12 new languages and contributing to a 28% increase in global user engagement.
-

Education

Bachelor — Instrument Engineering

Sevastopol Technical State University, Ukraine

Languages: English (fluent), Ukrainian (native), Russian (native), Spanish (conversational)
